TITLE/SIGNIFICANCE:

TERRAIN MODEL ON AN ARTILLERY SUBCALIBER RANGE,
KUNMING MILITARY REGION, CHINA

COMMENT: A terrain model on an artillery subcaliber range was identified at Changning Army Bks AL-1 [REDACTED] The terrain model was represented by chalked contour and grid lines. The contour lines, which represent actual terrain features, help simulate combat conditions; the grid lines are probably used to train forward observers with terrain-to-map correlation. This type of model differs significantly from advanced models which consist of actual miniature terrain features.
